

PASSIVE MATTRESSES

LINET

Portfolio

For comfort and safety

Quality mattresses from LINET for all

Wide selection according to the patient's condition

A broad spectrum of foam types and mattress designs for the various needs of hospital wards and nursing homes. Choose the right surface for your patient/client on the following pages.

Safety and comfort

The mattresses are designed to improve pressure redistribution through the mechanisms of immersion and envelopment. They also offer high levels of lying and sleeping comfort.

your needs

High-quality materials and production

Only the most high-grade materials are used in a production process that meets international standards. Therefore, the mattresses remain fully functional for a long lifetime. Quality management system certified according to DIN EN ISO 9001 and 13485. Environmental management system certified according to DIN EN ISO 14001.

Infection control

LINET mattresses are protected by a waterproof and vapour permeable cover. The cover is antibacterial equipped with long durability and stability. The surface and sides are made of proven PERLASTIC® silber** according to the guidelines for bed hygiene in clinics and care.

** Valid for MediMatt 30, ViskoMatt 10, 30, 50.

Foam

Viscoelastic foam is often referred to as “**memory foam**”. It reacts to body heat and body weight. This allows the body to sink into the mattress slightly, providing **optimal support and adjustment** to the body’s contours. The resulting pressure relief is the best choice for pressure injury prevention.

A cold foam is superior quality material due to its open pores. It ensures **high air permeability** and pleasant sleeping conditions. It quickly returns to its original shape without permanent deformation.

A standard PU foam cut to alter the deformation properties of the foam. These types of modifications break the surface tension of the foam increasing its ability to conform to the body shape.

Cover

PERLASTIC® silver protective cover

- High infection prophylaxis
- Two handles for an optimized handling
- Hidden extra strong zipper
- Bi-elastic and dimensionally stable, long durability and stability
- Extra strong PU coating for permanent protection against bacteria and viruses
- Breathable
- Antimicrobial equipped
- Latex free

A perfect fit of the cover: no wrinkles for excellent prophylaxis of pressure injuries.

waterproof

antibacterial

The mattress cover is a close fit to the foam core inside, protecting both the mattress and the patient’s skin. The cover includes a number of technical features that supports this dual function.

- Water resistant
- Multi-stretched
- Vapour permeable
- Fungal and microbacterial resistance

waterproof

antibacterial

Passive Mattresses Portfolio

		VALUE			ADVANCED
		EffectaCare 10 — Monoblock foam mattress with wave profiling on both sides which makes it flippable inside the cover.	EffectaCare 20 — Monoblock foam mattress. The core is cut transversely on top in the sacral area. Bottom profiling allows easier mattress positioning.	PrimaCare 10 — One layer mattress with transverse and longitudinal profiling at the top part. Fully profiled for additional contouring.	MediMatt 30 — Two lying surfaces with high elastic foam for high comfort. Lying surface with a polyether-cold foam and support layer from polyether foam.

PREMIUM

ViskoMatt 10

— Entry-level model for pressure injury prevention with good pressure relief. Viscoelastic foam surface with a polyether support layer.

ViskoMatt 30

— Very good pressure relief. Highly elastic and durable with an antimicrobial viscoelastic polyurethane foam surface and a polyether cold foam support layer.

ViskoMatt 50

— Excellent pressure relief. Highly elastic and durable with an antimicrobial viscoelastic polyurethane foam surface and a polyether cold foam support layer.

Foam connection without adhesive seams

- Uniform distribution of the contact pressure without hard seams
- Highest pressure relief

Edge Zone Reinforcement

Strong 10 cm reinforcement at the peripheral zone:

- Easy self-mobilization of the patient
- Excellent fall protection

Labelling

UDI compliant labelling

- According to the requirements of the european MDR
- Cover and core labelled for easy traceability

ViskoMatt Premium Mattresses

ViskoMatt 50

The upper layer of the ViskoMatt 50 is made of viscoelastic foam to ensure a high level of comfort and pressure injury prevention. The mattress also features

a reinforced pelvic area to prevent pressure injuries when the backrest is raised.

Head area from cold foam (33 kg/m³)

Lying surface with an antimicrobial equipped viscoelastic foam (7 cm, 85 kg/m³)

Foot area from cold foam (33 kg/m³)

10 cm wide reinforced edges

Support layer from cold foam for middle area (9 cm, 80 kg/m³)

Visko

ViskoMatt 30 offers optimum pressure relief of 35% on average. The high-quality foams ensure high stability and

Head area from cold foam (33 kg/m³)

10 cm wide reinforced edges

Why Viscoelastic = Memory Foam

- The material “remembers” the burden and after getting up the contours of the body are still visible.
- The core of viscoelastic mattresses adapt to each individual body form depending on temperature and weight.
- The pressure is spread equally and the body is ideally relieved = mode of action for pressure injury prophylaxis.

Matt 30

excellent durability. In addition to this, local pressure points are avoided.

ViskoMatt 10

ViskoMatt 10 has viscoelastic foam to provide optimal pressure distribution for all parts of the body that are in

contact with the mattress, considerably reducing the risk of pressure injuries.

Why cold foam

Cold foam (HR, High resilience) is created by technologically modifying standard polyurethane foam. It is produced at lower temperatures to ensure that it has superior properties.

- It has an open-cell structure that makes it very breathable
- It is durable, flexible, and dimensionally stable with high point elasticity

Quality defined by density

- The higher the density of foam, the:
- greater the restoring force and pressure release
 - longer the durability of the mattress

Density specifies how many kilograms of foam there are per cubic meter.

Example: density 60 = 60 kg/m³

PERLASTIC[®] silver protective cover

For MediMatt 30, ViskoMatt 10, 30 and 50. Total weight 230 g/m².

The trickot sock between the cover and the core a long mattress lifetime

The cover consists of two parts: outside PU-coating and inside polyester-textile

Welded seams

Extra stable spiral-zipper

Individual handles

PU-Coating

- Extremely durable and abrasion-resistant. Triple coating with 90g/m².
- Bacteria and virus proof (Liquid-tight according to ISO 1420 > 200 cm)
- Tight against fluids and constant against urine, blood and ointments
- Antimicrobial, contains zinc ions which prevent the development of mould
- Breathable (Water vapor transmission at ASTM 96-66 550 g/m² in 24 hour by 38 °C)

With the trickot sock, which is between cover and core, the cover can easily be changed. It reduces friction and shearing forces and increases the mattress lifetime.

Textile ensures

the stability and the PU coating the function. The textile is an especially fine woven product with narrow mesh that provides high durability and reduces the elasticity to decrease wrinkles. High grammage 140 g/m².

Option: Evacuation Cover Pro

Best risk management: simple and fast evacuation – combined with the highest hygiene standards.

Infection Control

- Full protective cover: lying surface and sides made of proven PERLASTIC® silber
- Tucked away straps: Protection against germs in hard-to-reach places

Extra-wide, all-round lip protects the carrying system from contamination.

Safe Evacuation

- 2 optimally positioned straps for securing the patient
- Wide belt buckles for optimal adjustment
- Suitable for patients weighing up to 250 kg

Long carrying handles at the head and foot end can be unfolded quickly and enable an uncomplicated one-man evacuation.
