stretcher sprint

Furniture for an ambience worth living in

stretcher sprint

The expert caring of persons in critical and life-threatening situations places the highest demands upon the nursing staff and the hospital equipment. These demands must be met, 24 hours a day, 7 days a week. For this reason we followed two clear goals when developing the Stretcher sprint: the safety of the patient and making the job of the nursing staff easier. The Stretcher sprint guarantees a speedy transport of the patient, easy handling and makes the first important examinations possible. The construction of the columns, extremely stabile and mechanically adjustable in height, guarantees an easy and quick cleaning and, in conjunction with the constantly smooth upper surfaces, makes an important contribution towards infection control.

An x-ray capable reclining surface allows photographs by means of a C-arm. When using an additional X-ray cassette holder, which may be positioned optionally either on the frame of the reclining surface or directly behind the back rest, there exists the possibility of taking important X-ray photographs directly on the Stretcher. The health risk associated with the moving of the patient is in this way prevented.

The unique mattress system offers three different variants. The mattress sprint plus makes patient transfer easier, as it has pull-out pads that close the free-space between Stretcher and operating table, hospital bed or X-ray table.

The visco-elastic surface of the mattress sprint comfort ensures that one lies in comfort, also during a longer stay on the Stretcher. Comprehensive protective elements against bumps and numerous reception possibilities for accessories round off the transport system.
